Answers:

1. Did your estimations reflect the actual effort?

Yes. The story points generally reflected the relative effort and complexity of the tasks. Smaller stories such as registration and eligibility were estimated at 3 points, while more complex tasks such as scheduling and certificate verification received higher estimates. The sprint was completed successfully, suggesting that the estimates were reasonably appropriate.

2. Was your backlog well-prioritized?
Yes. High-priority functionality related to citizen registration, eligibility, vaccination scheduling, dose management, and certificates was prioritized. The backlog was organized according to the importance of completing the core vaccination-management workflow.

3. How did your simulated sprint align with your plan?
The simulated sprints largely aligned with the plan. Sprint 1 focused on registration, eligibility, and vaccination-slot scheduling, while Sprint 2 focused on dose management and digital vaccination certificates. All planned sprint items were eventually completed.

4. What insights did the burndown chart give about your team's capacity?
The burndown chart showed that the team was able to complete the planned work within the sprint. The work did not decrease perfectly steadily; a larger amount of work was completed toward the end. This suggests that the team had sufficient capacity, but work could have been completed more consistently throughout the sprint.
